

SQUARE MOUNT

- » The Square Mount offers maximum flexibility in placement and is designed for use on flat surfaces with no space limitations beyond the table's footprint.
- » Mounting Surface: Wood, Composite or Concrete

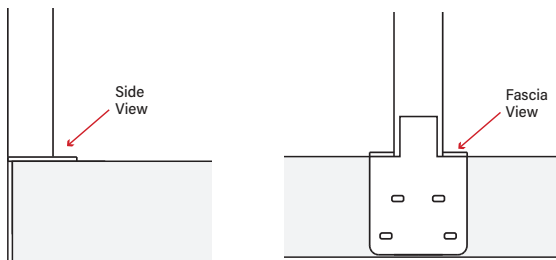

C MOUNT

- » The C Mount is designed for use on flat surfaces where space is limited outside the table's footprint. It is ideal for mounting adjacent to deck pilings, cleats, or other obstructions.
- » Mounting Surface: Wood, Composite or Concrete

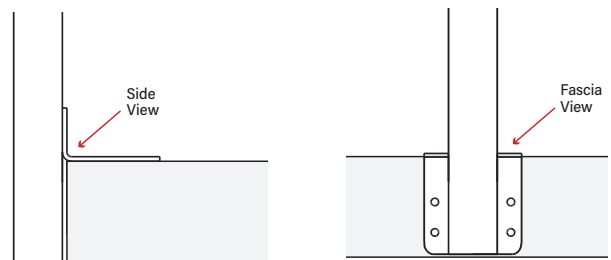

L BRACKET MOUNT

- » The L Bracket is designed for tables mounted at the edge of the dock, offering a secure grip on both the top and side. This mounting option is ideal for wood or composite docks and works particularly well on docks with limited walkway space.
- » Mounting Surface: Wood or Composite

CANTILEVER MOUNT

- » The Cantilever Mount extends the tabletop from the center point off the dock. This bracket is flush mount to the dock's edge, providing strength and securely hold the table in place. Ideal for docks with narrow pathways, the cantilever is designed to maximize dock space.
- » Mounting Surface: Wood, Composite or Concrete

COMPOSITE & WOOD DECKING

All mounting bolts must be secured into a supportive structure. Use stringers or add blocking underneath the deck to ensure proper attachment.
